Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics)

By Dimitri P. Bertsekas

Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) By Dimitri P. Bertsekas

Computer Science and Applied Mathematics: Constrained Optimization and Lagrange Multiplier Methods focuses on the advancements in the applications of the Lagrange multiplier methods for constrained minimization.

The publication first offers information on the method of multipliers for equality constrained problems and the method of multipliers for inequality constrained and nondifferentiable optimization problems. Discussions focus on approximation procedures for nondifferentiable and ill-conditioned optimization problems; asymptotically exact minimization in the methods of multipliers; duality framework for the method of multipliers; and the quadratic penalty function method. The text then examines exact penalty methods, including nondifferentiable exact penalty functions; linearization algorithms based on nondifferentiable exact penalty functions; differentiable exact penalty functions; and local and global convergence of Lagrangian methods.

The book ponders on the nonquadratic penalty functions of convex programming. Topics include large scale separable integer programming problems and the exponential method of multipliers; classes of penalty functions and corresponding methods of multipliers; and convergence analysis of multiplier methods.

The text is a valuable reference for mathematicians and researchers interested in the Lagrange multiplier methods.

Editorial Review

Review
"This is an excellent reference book. The author has done a great job in at least three directions. First, he expertly, systematically and with ever-present authority guides the reader through complicated areas of numerical optimization. This is achieved by carefully explaining and illustrating (by figures, if necessary) the underlying principles and theory. Second, he provides extensive guidance on the merits of various types of methods. This is expremely useful to practitioners. Finally, this is truly a state of the art book on numerical optimization." --S. Zlobec, SIAM Review

About the Author
The author is McAfee Professor of Engineering at the Massachusetts Institute of Technology and a member of the National Academy of Engineering.

Users Review

From reader reviews:

Donna Jennings:

Book is to be different for every single grade. Book for children till adult are different content. As you may know that book is very important for all of us. The book Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) seemed to be making you to know about other expertise and of course you can take more information. It is rather advantages for you. The reserve Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) is not only giving you a lot more new information but also to be your friend when you sense bored. You can spend your own personal spend time to read your book. Try to make relationship while using book Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics). You never truly feel lose out for everything in case you read some books.

Rose Knowlton:

Here thing why this particular Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) are different and reputable to be yours. First of all reading a book is good nevertheless it depends in the content of computer which is the content is as tasty as food or not. Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) giving you information deeper since different ways, you can find any publication out there but there is no guide that similar with Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics). It gives you thrill studying journey, its open up your current eyes about the thing which happened in the world which is perhaps can be happened around you. You can easily bring everywhere like in park, café, or even in your approach home by train. In case you are having difficulties in bringing the branded book maybe the form of Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) in e-book can be your option.

Virginia Hause:

Information is provisions for anyone to get better life, information presently can get by anyone from everywhere. The information can be a knowledge or any news even a concern. What people must be consider while those information which is in the former life are difficult to be find than now could be taking seriously which one is acceptable to believe or which one the particular resource are convinced. If you get the unstable resource then you buy it as your main information there will be huge disadvantage for you. All those possibilities will not happen inside you if you take Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) as your daily resource information.

Haley Berg:

As a college student exactly feel bored in order to reading. If their teacher questioned them to go to the library as well as to make summary for some publication, they are complained. Just little students that has reading's heart and soul or real their leisure activity. They just do what the educator want, like asked to the library. They go to there but nothing reading critically. Any students feel that examining is not important, boring in addition to can't see colorful images on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this era, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore , this Constrained Optimization and Lagrange Multiplier Methods (Computer Science & Applied Mathematics) can make you truly feel more interested to read.
