**Editorial Review**

From School Library Journal

Grade 6-10—The use of assisted reproductive technology (ART) holds promise of helping infertile couples conceive. However, the science behind it raises numerous ethical and legal questions. A critical issue, for instance, is whether or not couples should have the right to design their own offspring using pre-implantation genetic diagnosis. Winkler covers this topic and provides a comprehensive picture of the current state of ART research. Future possibilities such as artificial wombs and cloning are also discussed. Numerous sidebars and color diagrams and photos are integrated into the text. Source notes include material through 2005. Libraries needing resources on the subject should consider purchase.—*Caroline Geck, Kean University, Union, NJ*
