Trashing the Planet: How Science Can Help Us Deal with Acid Rain, Depletion of the Ozone, and Nuclear Waste (among Other Things)(Library Edition) By Dixy Lee Ray

[Read by Jeff Rigenbach]

Trashing the Planet is the one book you need to get a common-sense grasp on the contentious issues of environmentalism, where science and politics overlap and well-meaning idealism turns to counterproductive eco-terrorism. Dixy Lee Ray, a marine biologist and former chair of the Atomic Energy Commission, calls for environmentalists to regain a sense of perspective and not let their ardor carry them into the realm of "noble lies."

Dr. Ray exposes how little the public knows about the environment, how piddling are man's influences upon it--volcanoes shoot more pollutants into the atmosphere than do all of man's industrial activities--and how complex are the interactions of natural phenomena.

Reminding us that "a well-tended garden is better than a neglected woodlot," *Trashing the Planet* is a breath of fresh air in the current debate dominated by rhetorical extremism.

Editorial Review

About the Author

DIXY LEE RAY (1914-1994) was a marine biologist. In 1973 she was appointed by Richard Nixon to chair the US Atomic Energy Commission, and was the first and only woman to do so.

LOU GUZZO is one of the most prolific writers of his day. Because of his penchant for writing, friends have dubbed Guzzo as a modern-day "Grandpa Moses of Literature."

Users Review

From reader reviews:

Nancy Farley:
