

Fading and Shadowing in Wireless Systems

By P. Mohana Shankar

Fading and Shadowing in Wireless Systems By P. Mohana Shankar

The study of signal transmission and deterioration in signal characteristics as the signal propagates through wireless channels is of great significance. The book presents a comprehensive view of channel degradation arising from fading and shadowing. Various statistical models including simple, hybrid, compound, complex and cascaded ones are presented with detailed derivations along with measures to quantify the deterioration such as the amount of fading, error rates and outage probabilities. The models range from the Rayleigh and Rician through Suzuki, generalized K, cascaded and alpha-mu and similar ones. This is followed by the analysis of mitigation of fading and shadowing through diversity (simple, hybrid, micro- and macro- level) and combining algorithms. The density and distribution functions, error rates and outages are derived and results analyzed to quantify the improvements. The effects of co-channel interference before and after the implementation of diversity are also analyzed. To facilitate easy understanding of the models and analysis, the background information in terms of probability and random variables is presented with relevant derivations of densities of linear and nonlinear transformation of random variables, the sums, products, ratios as well as order statistics of random variables of all types. The book also provides material on digital modems of interest in wireless systems. Thus, the book with 1100+ equations and 350+ Matlab generated figures and tables is an ideal source for students, educators, researchers and professionals in wireless communications allowing access to information currently unavailable.

Editorial Review

From the Back Cover

In recent decades, growth in the field of wireless communications has led to an exponential rise in the number of journals catering to the research community. Still unmet, however, is the need to fully and comprehensively understand the effects of channel degradation

brought on by the statistical fluctuations in the channel. These fluctuations mainly manifest as variations in signal power observed in the channel generally modeled using a variety of probability distributions, both in straight forms as well as in compound

forms. While the former might explain some of the effects, it is the latter, namely, the compound models, which incorporate both short term and long term power fluctuations in the channel, explain the much more complex nature of the signals in these channels.

Fading and Shadowing in Wireless Systems offers a pedagogical approach to the topic, with insight into the modeling and analysis of fading and shadowing.

Beginning with statistical background and digital communications, the book is formulated to follow the details of modeling of the statistical fluctuations of signals in these channels. The author describes degradations in the channels arising from the statistical fluctuations in terms of various measures. This is followed by a discussion of

diversity and associated signal processing algorithms to mitigate the effects of statistical fluctuations in the channel as well as quantitative measures of improvements brought on by diversity. The book also examines the effects of cochannel interference.

About the Author

Dr. P. M. Shankar is the Allen Rothwarf Professor of Electrical and Computer Engineering.

Users Review

From reader reviews:

Raul Joyner:

The book Fading and Shadowing in Wireless Systems can give more knowledge and also the precise product information about everything you want. Why must we leave a very important thing like a book Fading and Shadowing in Wireless Systems? Wide variety you have a different opinion about reserve. But one aim this book can give many details for us. It is absolutely appropriate. Right now, try to closer using your book. Knowledge or data that you take for that, you may give for each other; you can share all of these. Book Fading and Shadowing in Wireless Systems has simple shape however you know: it has great and big function for you. You can appear the enormous world by start and read a e-book. So it is very wonderful.

Dale Fain:

Book is to be different for each and every grade. Book for children until eventually adult are different

content. We all know that that book is very important normally. The book Fading and Shadowing in Wireless Systems ended up being making you to know about other understanding and of course you can take more information. It is very advantages for you. The reserve Fading and Shadowing in Wireless Systems is not only giving you much more new information but also for being your friend when you really feel bored. You can spend your spend time to read your guide. Try to make relationship using the book Fading and Shadowing in Wireless Systems. You never feel lose out for everything in case you read some books.

Carey Gilliam:

Reading a book being new life style in this 12 months; every people loves to learn a book. When you read a book you can get a lot of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. If you wish to get information about your review, you can read education books, but if you act like you want to entertain yourself look for a fiction books, this kind of us novel, comics, in addition to soon. The Fading and Shadowing in Wireless Systems provide you with new experience in studying a book.

Trudy Clark:

In this period of time globalization it is important to someone to obtain information. The information will make professionals understand the condition of the world. The health of the world makes the information much easier to share. You can find a lot of sources to get information example: internet, newspaper, book, and soon. You can see that now, a lot of publisher in which print many kinds of book. Often the book that recommended for your requirements is Fading and Shadowing in Wireless Systems this reserve consist a lot of the information from the condition of this world now. This particular book was represented how does the world has grown up. The vocabulary styles that writer require to explain it is easy to understand. Often the writer made some analysis when he makes this book. Here is why this book acceptable all of you.
